

- check SQL part

July 9, (2)

- is the database storage fine?

→ storing in database using "for loop" with "iterators"

91 seconds.

TypeError: NoneType object is not iterable.

→ removed the empty pixels.

→ trying to retrieve all data.

```
for row in db.execute("select * from  
print row  
finaldata")  
i+=1
```

print i

medianarray originally had 10196 values

after pixel tasks - only 809 objects remain!

added a counter.

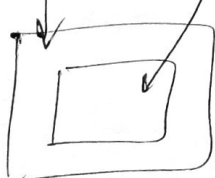

→ adds length of "dat" after every iteration.

7264

→ plotted both medianra & dec

and

ra/dec obtained from database after pixel tasks.

look nice!
