

June 24 (1)

→ table where () - faster.

why are we getting -ve obj ids?

unsigned/signed issue
with pytables!

for i , pos-ind in enumerate (mask for Gal):

① triand.col('obj-id')[pos-ind]

② or you could just say the i th element of the mask itself!

ISSUES → check percentile 0.75, 0.25 or 75, 25?
description of percentile func shows → [0, 100] as the range.

→ since for stars you need original RA/DEC values ~~of~~
of galaxies — you should store them separately.
initially. objInPixelfile 2

→ objInPixelfile = testfile[pixelIndexforObj == pixelNo]

↓
triand ? this should be searchfile
and NOT
testfile!

↓
since we need $\log_{10} obs > 3.0$!!
