

- Selection of good galaxies not done in the main file — for residuals.

June 28 (1)

- you do not need to separately write the functions for the last object —

$$np.arange(\text{no. of set of Gal} - 1) + 1$$

↓
We do! Silly me!

'i' does go to the last value like this

0	1.	no. of set of Gal = 9
1	1.	
	2	
	2	-1 = 8
	3	
	3	(0 --- 7) + 1
	3	
8	4	(1 --- 8)

but! ✓

last object does not get processed!
 if the no. of obs > 3.0, it has to be processed.

- fix observations for an object → check results to be checked, etc.

- check usage of variables defined in functions' file.

- why do you need two variables in parameter list to be sent to the fixel task function? → i & pickixel no?
 we do!
 - just use pickixel no. to give corresponding ra & dec values.
