①

error with pixel tasks - functions.

↪ we do not have objects in the pixel!

⇒ empty object arrays
ra arrays
dec
⇒ obj in pixel [0]
* Not possible

⇒ We add an exception return zero arrays at index error.
→ row no. 74
in parameter list.

→ pixel nos. go on till 740!

→ let's count ~~the~~ zero arrays.

Nine pixels faulty due to index error
— if we reduce the no. of obs to 2.0 from 3.0, it
does not help.

↓
ignore these, do not return empty arrays.
since

dat =
gives an error on empty arrays.
→ only length-1 arrays can be converted to Python
scalars.

↪ I got 'NoneType' object is not iterable. ^{fn iterator}
I goes away — when I reloaded everything. _{execute()}
