

running integral code for chunk 86

July 20, 2015 (1)

$$ra_{min} = 137.483$$

$$dec_{min} = 23.67$$

$$max = 148.88$$

$$max = 33.67$$

- pixelIndex Array — I have taken pixel index for obj — That makes sense since \Rightarrow you need to have 'good' galaxies where you are updating stars.
- (2) you do not need to select good pixels again. That has been done while saving chunks in database you can directly match them.
